

# Ballinger® Single-Use Sterile Rigid Biopsy Forceps for Colorectal Biopsy

The Ballinger® range of colorectal biopsy forceps offers the practitioner a purpose-designed, single-use alternative to traditional re-usable instruments. Ballinger® Forceps are supplied sterile and designed for routine use in outpatients, DSU & operating departments.

Ballinger® Forceps are available in two variants according to shaft length. Each sterile pouch carries 3x peel-off labels to enable sample ID and tracking.

## Ergonomic Hand Grip

The plastic injection-moulded handgrip is an ergonomic design to enable the forceps to be operated away from the eye-line of sight through the scope. A steel spring built into the handgrip ensures that the default position of the jaws is open.

## Steel Shaft

The rigid cylindrical steel shaft is 3mm in diameter, for extra stability & control when operating the cutting jaw through a narrow rectoscope and eyepiece under direct vision. The shaft is available in two lengths: either 420mm for use with a standard 250mm rectoscope, or 270mm for use with a short scope or proctoscope.

## Cutting Jaws

The cutting jaws are 9mm long x 2.5mm wide, producing a high cell yield from a bite sample size small enough not to cause excessive bleeding or trauma.

### *Manufactured to comply with:*

ISO13485:2003, MDD93/42/EEC, CE-marked

### *Available in:*

Box of 10, individually peel-pouched, sterile.

order code	description	items per box
